Outline Nickel characterization at microwave frequencies
Anomalies in ENIG plated interconnects
Identification of nickel parameters
GMS-parameters extraction from measured data
Electromagnetic model for plated traces
Landau-Lifshits model for ferromagnetic metal
Nickel parameters identification
Effect of Nickel on multi-gigabit digital signals

Nickel Characterization for Signal Integrity Analysis

where the f_i are again environmental variables. The g_i are smooth functions fit by the model, with the amount of smoothing controlled by a width parameter. This is the same form as the log probability of the pixel x in a Maxent model with threshold features, and regularization has an analogous effect to smoothing on the otherwise arbitrary functions g_i .

An inverse problem in science is the process of calculating from a set of observations the causal factors that produced them: for example, calculating an image in X-ray computed tomography, source reconstruction in acoustics, or calculating the density of the Earth from measurements of its gravity field.. It is called an inverse problem because it starts with the results and then calculates ...

Inverse problem - Wikipedia

Structure of a mixture model
General mixture model. A typical finite-dimensional mixture model is a hierarchical model consisting of the following components: . N random variables that are observed, each distributed according to a mixture of K components, with the components belonging to the same parametric family of distributions (e.g., all normal, all Zipfian, etc.) but with different parameters

Water-soluble glass patterned by 3D printing is a versatile tool for tissue engineering and microfluidics. Glasses can be patterned layer-by-layer as in conventional fused deposition modeling but also along 3D, "freeform" paths.

Model-guided design and characterization of a high

Reservoir characterization overview. Reservoir characterization encompasses all techniques and methods that improve our understanding of the geologic, geochemical, and petrophysical controls of fluid flow. It is a continuous process that begins with the field discovery and all the way through to the last phases of production and abandonment.

Effective Modeling for Good Decision-Making What is a model? A Model is an external and explicit representation of a part of reality, as it is seen by individuals who wish to use this model to understand, change, manage and control that part of reality.

Time Series Analysis for Business Forecasting

Thermogravimetric analysis coupled to Fourier transform infrared spectroscopy (TG/FT-IR) is a very popular technique for rubbers characterization. It involves analyses of the base polymer and additives.

Ethylene-“propylene”-diene (EPDM) rubbers are frequently investigated by TG/FT-IR; however, the ...
